

THE ELABORATION OF NEW ANTIRADIATIVE METHODS WITH THERAPENTIC PROPHYLACTIC EFFECT

V. I. Palamarchuk, S. S. Gulyaev-Zaytsev, N. G. Makosiy

The results of our multiple researches on the study of new substances and compounds properties in experimental conditions on animals and clinical observations permit us elaborate new highly efficient methods and food ingredients with therapeutic-prophylactic effects - "Biostim-40" and Biostim-51". New therapeutic-prophylactic products is advisable for introduction in the therapeutic-prophylactic measures of public health of population of Ukraine, but first of all for medical treatment and prevented measures for professional contingent of people, who works in the field of constant action of ionizing radiation and suffered from the accident in ChNPP.
