

TO THE QUESTION ON ^{137}Cs DISTRIBUTION IN COMPONENTS OF FUNGI COMPLEX

O. B. Tscvetnova, N. E. Zarubina

Peculiarities of ^{137}Cs distribution in components of fungi complex were determined on the basis of long term investigation. It was shown that the concentration of ^{137}Cs in fruit bodies and mycorrhiza of fungi is practically equal. ^{137}Cs distribution in fruit bodies is changing due to their development: differences in specific activity of stipes and caps of young individuals is minimum; differences increase as fruit bodies matured due to ^{137}Cs accumulation in hymenophore.
