

RADIOECOLOGICAL SITUATION IN “CRITICAL” SETTLEMENTS OF NORTH-EASTERN POLLISIA OF UKRAINE AND WAYS OF ITS IMPROVEMENT

S. V. Polishchuk, V. O. Kashparov

From radiological point of view the scientists consider modern radioecological situation with levels of pollution of agricultural production. As an example it is taken critical settlement in Rovno region. Basic components of internal radiation dose are determined among the population and also the researchers consider that one of possible ways of radiological situation improvement in critical settlements is radical improvement of natural fodder land.
