

## **19. SEASONAL DYNAMIC OF CONTENT OF $^{137}\text{Cs}$ IN MUSHROOMS**

**N. E. Zarubina**

Researches of seasonal dynamics of content of  $^{137}\text{Cs}$  in mushrooms were carried out. Under condition of selection, mushrooms of different kinds only 2 times in one year - in the beginning and in the end of vegetative period - are marked with increase of levels of specific activity of  $^{137}\text{Cs}$  by autumn. During monthly selection of mushrooms, dynamics of the contents of  $^{137}\text{Cs}$  carries spasmodic character. Seasonal dynamics of the contents of  $^{137}\text{Cs}$  varies for mushrooms of different kinds.
