

**A SET OF TECHNOLOGICAL DEVICES FOR REPLACING COLLIMATORS
IN HORIZONTAL CHANNELS OF REACTOR**

V. A. Libman, V. F. Razbudey, Yu. B. Shevchenko

Devices of original construction for replacing collimators are described in this paper. Special attention has been focused on technology of moving off “outdated” collimators that have been stuck inside a channel. Carried out set of devices has been used effectively in experiments at the reactor of the Institute for Nuclear Research of NAS of Ukraine and may be used at other reactors.
